DATE MAILED: 03/22/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/783,740

Applicant(s)

HORI ET AL.

Examiner

Ing-Hour Lin

Art Unit

1725

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 February 2004.
2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 1-15 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☒ The drawing(s) filed on 20 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 2/04 and 5/04.
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
5) ☐ Notice of Informal Patent Application (PTO-152)
6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claims 1-3, "sulfate" has crystal water but "in dry state" is unclear. Shall the sulfate be called "in hydrate state" because it has crystal water?

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1725

5. Claims 1-2, 6-8 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 53119724 in view of Berg et al.

JP '724 (see abstract) teaches the claimed water-soluble casting mold and method for manufacturing the mold including mixing refractory granular material with binder containing magnesium sulfate heptahydrate ($\text{MgSO}_4 \cdot 7 \text{H}_2\text{O}$) and packing the mixture in a mold and drying the mixture to produce the claimed mold. JP '724 fails to teach the use of retaining a portion of crystal water in the magnesium sulfate.

However, Berg et al (col. 2, lines 55) teach the use of retaining a portion of crystal water in the magnesium sulfate and magnesium chloride for the purpose of releasing crystal water (col. 3, lines 1+) from the magnesium sulfate and magnesium chloride over a wide high temperature range and enhancing high temperature resistance of the mold (consolidated building material). It would have been obvious to one having ordinary skill in the art to provide JP '724 the use of retaining a portion of crystal water in the magnesium sulfate and magnesium chloride as taught by Berg et al in order to effectively release crystal water from the magnesium sulfate and magnesium chloride over a wide high temperature range and enhancing high temperature resistance of the mold.

6. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP 53119724 in view of Berg et al and further in view of Sadan.

JP '724 in view of Berg et al fails to teach the use of monohydrate crystal water for the sulfate in the mold.

Art Unit: 1725

However, Sadan (col. 6, lines 15+) teaches the use of monohydrate crystal water for the sulfate as water resistance is concerned because monohydrate sulfate can not only release but also absorb up to 100% of its weight in water without caking. It would have been obvious to one having ordinary skill in the art to provide JP '724 in view of Berg et al the use of monohydrate crystal water for the sulfate as taught by Sadan et al in order to effectively increasing the life time of the mold.

7. Claims 4-5 and 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 53119724 in view of Berg et al and further in view of Seeney et al.

JP '724 in view of Berg et al fails to teach the use of improved binder including potassium dihydrogen phosphate and aluminum phosphate.

However, Seeney et al (col. 1, lines 33+) teach the use of improved binder including potassium dihydrogen phosphate and aluminum phosphate (a product of aluminum dihydrogen phosphate after heating and losing water) for the purpose of preventing air pollution (col. 1, lines 28+) when molten metal cast in the mold. It would have been obvious to one having ordinary skill in the art to provide JP '724 in view of Berg et al the use of improved binder including potassium dihydrogen phosphate and aluminum phosphate as taught by Seeney et al in order to prevent air pollution when molten metal cast in the mold.

8. Claims 12 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 53119724 in view of Berg et al and further in view of JP 63132745.

JP '724 in view of Berg et al fails to teach the use of microwave heating.

Art Unit: 1725

However, JP '745 (see abstract) teaches the use of microwave for the purpose of selective heating and drying free water in the binder and to produce a mold having high strength and retaining a portion of crystal water. It would have been obvious to one having ordinary skill in the art to provide JP '724 in view of Berg et al the use of selective heating by microwave as taught by JP '745 in order to produce a mold having high strength and retaining a portion of crystal water.

9. Claims 13 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 53119724 in view of Berg et al and further in view of Nishio et al.

JP '724 in view of Berg et al fails to teach the use of a ventilative ceramic mold.

However, Nishio et al (col. 2, lines 29+)) teach the use of a ventilative ceramic mold 7 for the purpose of exhausting air in the molding granular material to produce a mold having high strength. It would have been obvious to one having ordinary skill in the art to provide JP '724 in view of Berg et al the use of a ventilative ceramic mold as taught by Nishio et al in order to exhaust air in the molding granular material to produce a mold having high strength.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ing-Hour Lin whose telephone number is (571) 272-1180. The examiner can normally be reached on M-F (8:00-5:30) Second Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Dunn can be reached on (571) 272-1171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 1725

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
